

NHDPlus – download and process NHDPlus grids and shapefiles

Usage:

SDMProjectBuilder - hydrography, Catchment and elev_cm
BASINS - full functionality

Inherits:

D4EManager.clsBaseDataExtension

Input:

Parameters:

Region as D4EMDataManager.Region

DataTypes as List of String:

all, allgrid, allshape, elev_cm, fac, fdr,
Region, Subregion, Basin, SubBasin,
Watershed, Subwatershed, Catchment, nhdarea,
NHDFlowline, NHDLine, NHDPoint, NHDWaterbody, streamgageevent,
Drainage, hydrography, hydrologicunits

CacheFolder as String

SaveFolder as String

Projection as String (PROJ4 format)

JoinAttributes as Boolean

Output:

Files:

grid or shapefile corresponding to each DataType

Libraries:

D4EMDataManager/SpatialOperations
